

For each vehicle you will need:

1 x Alcohol pad

2 x Argus Tracking barcode stickers (with the same number)

Note: Please read this and steps 1 and 2 before applying barcodes to vehicle.

Each vehicle will require the application of 2 barcodes.

Please make sure both barcodes have the same number.

We recommend applying the barcodes somewhere that is easily accessible and will stay clean, and out of sunlight so it does not fade - one on the sunvisor and one inside of your vehicle's door frame (see the images on the right), or one inside the boot lid is ideal.

Step 1

Prepare the area where the barcode will be applied by cleaning the area with the enclosed alcohol based cleaner to ensure it is free of grease and dirt.

Step 2

Apply the barcode sticker to the cleaned area.

Remember, you will need to scan the barcode each time you drive the vehicle so make sure it is easily accessible!

Now, to set up your barcode please follow the instructions for **Setting up the driver app for the first time.**
