

How to clean and sanitise your vehicle for COVID-19

Follow these steps to manage the cleanliness of your fleet:

Clean all common areas before and after a vehicle is used, such as:

- Door handles (internal and external)
 - Internal handles above doors
 - Seats
 - Seatbelts
 - Head rests
 - Window controls
 - Boot lid
 - Steering wheel
 - Dashboard
 - Control buttons
 - Gear stick
 - Centre console
- **While using the vehicle, the vehicle's air-conditioning should be set to fresh air, not recirculated air.**
 - **Use medical grade disinfectant for cleaning your vehicle. Ensure you follow the product's instructions and Personal Protective Equipment (PPE) advice.**
 - **Wash your hands thoroughly after cleaning the vehicle using soap and water and dry your hands. If water is not available, clean your hands by using an alcohol-based hand sanitiser.**
