

# Impact Sensor

The Impact sensor is designed to detect any impact greater than 4Gs on your company vehicle/s and send you an emergency alert via the app or email.

Be alerted to high-impact incidents involving your fleet

Receive emergency alerts via the app or email when your company vehicle/s has been involved in any impact greater than 4.5Gs. This includes vehicles that have been involved in a crash, rolled over, or have been hit by another vehicle. This feature is available now and can be turned on remotely for no extra cost or downtime. To activate this functionality please contact your account manager for further assistance (a new hardware upgrade may be required, however, for most this feature is already installed and ready to be activated).

## Features

- Detects any impacts greater than 4.5Gs and sends an emergency alert via the app or email.
- Includes 'Black Box Records' that record and send data at a much higher interval when impact has been detected.
- Available now and can be turned on remotely for no extra cost or downtime.

## Benefits

- Meets more of your obligations under the Health & Safety Reform Bill.
- Keeps you informed of any high-impact vehicle incidents 24/7.
- Black Box Records allow you to see in greater detail what happened for a few seconds on either side of the impact.
- Gives your team increased driver assurance knowing that you'll be alerted to any serious accidents.

**Please Note:** It is important to understand that this is not a crash sensor, and it does not replace the need for you to contact emergency services in the event of a serious crash or medical emergency. Please do not rely on this feature as a life-saving device.

This service is dependent on good network coverage and this feature will not work outside of Vodafone cellular coverage. If 100% coverage is critical to you, please read more about our SATRACKS solution here or contact your account manager.
